## The Largest Daily Gas Supply Volume Record on January 6, 2005

Tokyo Gas Co., Ltd.

Daily gas supply volume on January 6, 2005 was 45.49 million cubic meters, which has broken the past record (44.92 million cubic meters on January 15, 2004) and has become our new record. It is the first time that daily gas supply volume exceeded 45 million cubic meters.

On Jan. 6, gas demand for both space heating and hot water was high because the temperature was quite low even in the daytime, with light rain in the afternoon. Demand by new customers in industrial and commercial sectors made the base demand higher. This also contributed to the new record.
