Development of an LNG Infrastructure Business in Indonesia

- Building an Inter-Island Transportation Network Using a Small-Scale LNG Carrier -

Tokyo Gas Co., Ltd.

Tokyo Gas Co., Ltd. (President and CEO: SASAYAMA Shinichi, “Tokyo Gas”) hereby announces that, together with its wholly owned subsidiary Tokyo Gas Asia Pte. Ltd. (President: YAO Yumiko), it has acquired all shares of PT AGP Indonesia Utama (“AGPIU”), an Indonesian company, and has joined a study on the development of the LNG infrastructure business being promoted by AGPIU (the “Project”).

Under the Project, AGPIU will work with PT PLN Energi Primer Indonesia (“PLN EPI”), part of Indonesia’s state-owned electricity utility group (the “PLN Group”), and Indonesian shipping company PT SUASA BENUA SUKSES (“SBS”) to develop offshore and onshore LNG-related facilities*1. A small-scale LNG carrier will make regular calls at six locations*2 on Sulawesi and the Maluku Islands, where population and electricity demand are expected to grow, and supply domestically produced LNG procured by the PLN Group to power plants owned and operated by the PLN Group.

By switching the fuel used for power generation from imported diesel fuel to LNG produced in Indonesia, the Project aims to reduce CO2 emissions and dependence on imported fuel, as well as fuel costs. The Project’s business model, which uses a small-scale LNG carrier to supply LNG to multiple power plants, is expected to be deployed across a broad range of regions in Indonesia, an archipelagic country comprising numerous islands.

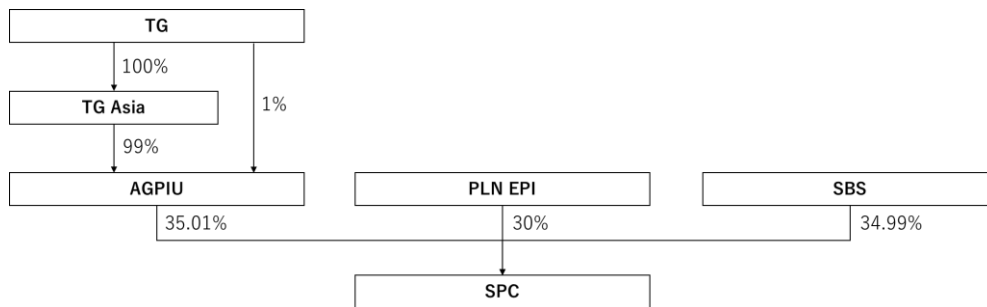

The Government of Indonesia has identified strengthening energy security as a key policy priority and is promoting the domestic use of LNG produced in Indonesia. The Project is aligned with this policy and will contribute to building a stable and sustainable energy supply system in Indonesia.

Tokyo Gas Group is committed to the challenge of the “Transformation of the LNG value chain” as stated in its management vision, “Compass 2030.” Leveraging the knowledge and expertise accumulated through many years of business experience in Japan and overseas, the Group will continue to contribute to the development of Asian countries and the realization of a low-carbon society by expanding its LNG infrastructure business.

*1: One floating facility, six onshore facilities, and one small-scale LNG carrier

*2: One hub location and five locations supplied by a small-scale LNG carrier
