The Tokyo Gas Group has 13 overseas hubs in 9 countries, namely the US, Australia, France, Singapore, Thailand, Indonesia, Vietnam, Philippines and Malaysia.

In North America where energy demand is high and long-term growth is anticipated for the natural gas market, we have joined gas development projects and are engaged in gas thermal power generation and energy service projects as the market is being liberalized and energy market transactions are developing.

In Australia which has achieved growth as a major supplier of LNG to East Asia, we are focusing on operation/management of the five LNG projects that we own.

We are working in collaboration with governments and corporations in Southeast Asia where demand for natural gas is expected to grow, engaging in midstream to downstream projects for terminals for receiving LNG, gas thermal power generation, gas distribution, energy services and such in an aim to develop an energy chain in these countries.
